# Observe seasonal changes

## Read or look closely

In fall, many deciduous trees lose their leaves. In spring, we see new buds.

## Answers

**1.** In which season do many leaves change colour?

In fall.

**2.** Name one clue that spring might be returning.

Example: buds.

**3.** Is one cold day enough to identify winter?

No. Other seasons can also have cold days.

**4.** Draw the same leafy tree twice, once in fall and once in spring. Show how its leaves or buds change.

Show a difference in leaves or buds.

**5.** Look at the same tree each week. Write one thing you could record to see if it changes.

Example: leaf count on a branch or when buds appear.
